Company.info for Salesforce

RELEASE NOTES

An overview of new features and improvements.

Release 5.6.1

Table of Contents

1. Improvements

This release includes several enhancements aimed at improved error handling, to enhance the overall performance and user experience.

1. Reduce duplicate error logs.
    To improve the error log's clarity and make it easier to review, duplicate error logs have been eliminated.
2. Avoid and improve catching Null pointer error
    General null pointer errors can be confusing for users and difficult to debug. To improve the user experience, efforts have been made to prevent these errors and provide more detailed error messages.
3. Update API version
    All template flows now use API version 55.
4. Improved flow error handling
    Detailed error messages have been added to enhance user experience and ease debugging by implementing error paths within the flow.

That's it!
